## **PROJECTS**

**Project Name:** Cheap Date

**Repo:** <https://github.com/NessJade96/cheap-date>

**Deployed:** <https://nessjade96.github.io/cheap-date/>

Cheap Date is a front end web application built as a group project that allows the users to search through hundreds of cocktail recipes and choose by the base alcohol type. It will then fetch the data for clients to use. Writing JavaScript using JQuery to create functions, click handlers, and utilising local storage to create a dynamic web application.

**Project Name:** Pawfect Match

**Repo:** <https://github.com/NessJade96/pawfect-match>

**Deployed:** <https://pawfect---match.herokuapp.com/>

Pawfect Match was a collaborative project to build a real-world full-stack application from scratch. This is an application where a user can post their pet for adoption. Other users can then message the owner to meet and potentially adopt the pet if it is their "perfect match". This app was created using MySQL, Express.js, Node.js, Javascript, MVC, and lastly I implemented nodeMailer for email notifications.
